

PAUL MONEY
HI FI & HOME THEATRE

The Project

To improve the retail lighting at the display area for its Mt Eden shop. To improve customer visual comfort and enjoyment of the shopping. It will also achieve a modern and high-tech image to match with its business.

Existing Lighting

The existing fluorescent tube troffers have been there for many years, looking old fashioned and tired.

The Solution

Replace the existing fluorescent tube troffers with 45w 5000K LED troffers. This gives a display area with evenly distributed lighting well above 800 lux except the theatre area. There is much improved visual effect for the products.

Benefits

- Improved Brightness and modern looking
- Increased Customer Satisfaction
- Less Colour Fading
- Lower Operating Costs in Power Consumption & Re-lamping Maintenance
